

PRODUCT ANALYSIS REPORT

ChatHouse vs Clubhouse

In-depth, screen-by-screen comparison

89/**100**
OVERALL PARITY

39 screens analysed · 11 functional zones

Based on an audit of the actual source code and automated tests

August 10, 2026

Method & scoring

Each ChatHouse screen is compared to its Clubhouse counterpart and rated for **parity**: **100 = matches or exceeds** Clubhouse for the intended function. Areas where ChatHouse **exceeds** Clubhouse are not penalised. The feature inventory comes from auditing the real code (screen .tsx files + hooks/partials/services/backend) and its automated tests, not assumptions.

90–100 full / superior parity **80–89** strong parity **60–79** partial **<60** gap

Technical context: ChatHouse is a **React Native (bare)** app — real-time audio via **LiveKit/WebRTC**, Node/TS backend. Clubhouse reference set: hallway, live rooms, Houses, profile identity, private VMs, House Chats, phone onboarding, events/RSVP and replays. August 10, 2026 verification: iOS microphone permission is requested and checked through the native WebRTC module; 3 deterministic pre-auth Maestro flows; production backend npm audit at 0 vulnerabilities. The mobile audit retains 12 “high” package entries from one Metro/Expo build chain around `image-size`, for which no patched release exists; an unsafe React Native downgrade is not counted as a fix.

Official Clubhouse sources (accessed August 10, 2026)

[About VMs](#) · [Find, Join, or Create Houses](#) · [House Chats](#) · [What are Live Rooms?](#) · [Replays](#)

These sources confirm asynchronous private voice VMs in 1:1 or group conversations, prerecorded House Chats, House search through Explore, private text/voice chat in live rooms, and replay recording, saving and downloading. Voice notes and group DMs are therefore scored as **parity**, never as ChatHouse-exclusive features.

1. Onboarding / Auth

ChatHouse screen	Clubhouse equivalent	ChatHouse state	Gaps	Score
LandingScreen	Welcome	Marketing + CTA, dev-skip	—	90
PhoneScreen	Phone entry	Country picker, E.164 validation, ≥16 gate	—	95
OtpScreen	SMS verify	6 cells, auto-submit, 5 tries, 60s cooldown	—	95
NameScreen	Real name	First/last before username (Clubhouse order)	—	100
UsernameScreen	Username	API suggestions + validation	—	95
SetupProfileScreen	Photo / bio	Photo + bio + X/Twitter import	—	95
InterestSelectionScreen	Topics	Multi-select min 3 / max 10	—	95
NotificationsPermissionScreen	Turn on notifications	OS prompt + push token registration	—	100
WelcomeSlidesScreen	(intro)	4-slide carousel	—	90
WaitlistScreen	Waitlist / invite gating	Dead screen (never routed)	No real invite gating; no contacts sync	40

Subtotal: **~89/100** — only real gap: no waitlist/contacts (low impact, Clubhouse is now open).

2. Hallway / Rooms (Clubhouse core)

ChatHouse screen	Clubhouse equivalent	ChatHouse state	Gaps	Score
RoomFeedScreen	Hallway	Paginated live feed, filters, upcoming, strips (wave / suggestions / recently-played), socket updates	—	92
RoomScreen	Room	Speaker/listener stage, raise hand + queue, full moderation (mute others / make-speaker / move-to-audience / mod / transfer host / kick+ban / mute-all / lock / hand restrictions), emoji reactions, live captions, background audio , ping+wave, tip, chat, ghost listener	Spatial audio ✕ · Music mode ✕	88

ChatHouse screen	Clubhouse equivalent	ChatHouse state	Gaps	Score
CreateRoomScreen	Start a room	3-level visibility, house, topics, co-hosts , scheduling	Recording is prepared in the backend but disabled in production until consent and operations are approved	90
InviteToRoomScreen	Invite to room	Search + multi-select (max 50)	—	90
ReplaysScreen	Replays	List + inline player (play/pause/progress)	Player has no seek ; no clips or host save/download workflow	60
EventsScreen	Upcoming / Events	Upcoming/Mine, RSVP , dedicated T-15/T-5 reminders , calendar .ics export , host reschedule/cancel	—	85

Subtotal: **~85/100** — very strong core; real gaps: **spatial audio**, **music mode**, replay depth.

3. Clubs ("Houses")

ChatHouse screen	Clubhouse equivalent	ChatHouse state	Gaps	Score
HouseListScreen	Clubs list	Mine / Discover tabs, in-place search (local Mine filter, debounced Discover API), empty/error states + retry, create FAB	No dedicated category filter in this list	90
HouseDetailScreen	Club page	Cover, rules, members, admin/mod/member roles , SOCIAL request inbox , live/scheduled/past rooms	—	90
CreateHouseScreen	Create club	Icon, name/desc/ rules , OPEN/SOCIAL/PRIVATE privacy	—	92
ManageHouseScreen	Club admin	Edit + delete (owner)	No cover/icon edit here	85
HouseInvitationScreen	Club invite accept	Accept/decline via deep-link	Inviter name absent from payload	85
InviteMemberScreen	Invite to club	Shareable link + targeted invite	—	90

Subtotal: **~89/100** — parity confirmed for House search/discovery; ChatHouse also places search directly in HouseList. Complete clubs model: 3 privacy levels + approval + roles.

4. Identity (Profile)

ChatHouse screen	Clubhouse equivalent	ChatHouse state	Gaps	Score
ProfileScreen	Profile	Real name + @username, bio, Joined , Nominated by , Twitter/Insta links , follow, wave, badges, custom links, live banner, block/report	— (ChatHouse extensions: badges/premium)	95
EditProfileScreen	Edit profile	Photo, names, username, bio, handles, DM privacy	—	90
FollowersScreen	Followers / Following	Tabs + inline follow	—	95
TipHistoryScreen	Payments	Tip history (sent/received)	<i>bonus — close to Clubhouse Payments</i>	85

Subtotal: **~91/100** — all Clubhouse identity markers + extras.

5. Discovery

ChatHouse screen	Clubhouse equivalent	ChatHouse state	Gaps	Score
ExploreScreen	Explore / Search	Trending rooms/clubs/users, search users/clubs/rooms/ topics, language/category filters , recent searches	—	92
NotificationsScreen	Activity	13 types , tabs, deep-links, composite/infinite pagination, mark-read, swipe-delete, private follow requests with accept/decline	—	90
FollowRequestsScreen	Follow request inbox	Paginated list, pull-to-refresh, accept/decline , accessible loading/error/empty states	—	90

Subtotal: ~90/100.

6. Messages ("Backchannel")

ChatHouse screen	Clubhouse equivalent	ChatHouse state	Gaps	Score
MessagesScreen	Backchannel list	1:1 + group conversations, voice preview, live socket, wired online-presence strip	—	90
ChatDetailScreen	DM thread	Text + voice notes , typing, read receipts, delete, emojis, real private audio call (closed 2-person room), privacy-aware presence, report/block	No attachment pipeline; the action is intentionally not shown	90
NewMessageScreen	New message	Search, 1:1 or group	—	95
GroupChatScreen	Group chat	Text + voice, draft restore	—	90
GroupInfoScreen	Group management	Rename / members / remove / leave	—	90
AddGroupMembersScreen	Add members	Search + exclude existing members	—	95

Subtotal: ~91/100 — voice notes and groups are parity with Clubhouse VMs; private calling, presence and safety actions are wired. Attachments remain the main gap.

7. Settings

ChatHouse screen	Clubhouse equivalent	ChatHouse state	Gaps	Score
SettingsScreen	Settings	Profile, GDPR (export / deletion / consent) , theme, invite (HMAC link + quota), clean logout, extras (premium/tips/admin)	Privacy moved to the Extensions screen	90
NotificationSettingsScreen	Notification settings	9 categories + frequency + per-club/user mute	—	95
BlockedUsersScreen	Blocked	List + unblock	—	95

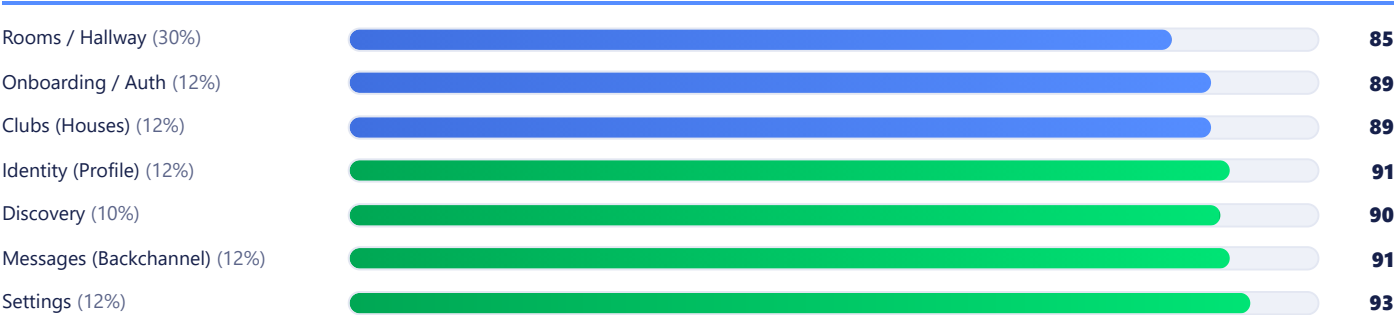

Subtotal: ~93/100.

8. Audited ChatHouse extensions (outside parity calculation)

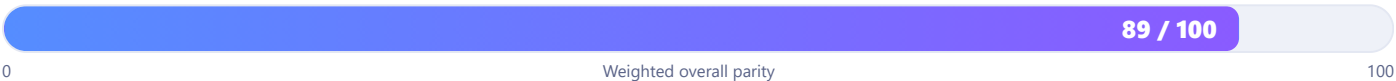

Item	Value added
MapsScreen	Geo-social map of online followers + Ghost Mode + join a room / send a DM from the map
Cross-cutting	Tips / monetization, premium "who viewed my profile", badges, custom profile links , integrated GDPR tools

This section inventories extensions visible in the ChatHouse code; it does not claim that Clubhouse lacks them and does not increase the score.

Summary by zone

Calculation: the seven zone weights total 100%; $\text{sum}(\text{zone score} \times \text{weight}) = 88.86$, rounded to **89**. Extensions outside parity do not inflate the score.

Strengths

- Faithfully reproduces the **Clubhouse core**: scored hallway, live rooms (stage, raise hand + queue, full moderation, reactions, live captions, background audio), 3-level-privacy clubs with roles and approval, complete identity, phone onboarding in Clubhouse order, events + RSVP, Backchannel DM.
- 1:1 and group text/voice messaging is **parity** with Clubhouse VMs, not an exclusive feature. In ChatHouse, this area also includes private calling, presence and report/block actions.
- Code-confirmed ChatHouse extensions include a geo-social map, integrated GDPR tools, badges/custom links and language/category search filters — without treating them as proof of overall superiority.

Remaining gaps

- Spatial audio** ✕ and **music mode / in-room sound sharing** ✕ (Clubhouse signature features).
- Replay depth**: player without seek, no clips or host save/download workflow.
- No real **waitlist / contacts sync** at entry.
- Polish: no DM attachments (affordance removed until the pipeline exists).
- Room recording remains deliberately gated off in production until consent and operational readiness are approved.

Conclusion. The score remains **89/100 screen parity** after factual correction: **88.86** rounded, with no bonus for voice notes or group DMs already available in Clubhouse. It reflects strong coverage of the audited scope, not proof of overall superiority. Remaining priorities are spatial audio, music mode, richer replays and DM attachments.
